

DAD Options: Miscellaneous Utilities

DAD has a number of options supporting needs ranging from system monitoring to special equipment integration. Many of these are available “off-the-shelf” and are of general applicability. Others can be developed to meet specific broadcaster requirements on a custom basis. Currently available utilities for general application include:

Watchdog / D / G / DB

Watchdog is a small utility designed to monitor DAD, Gateway and/or DropBox applications to ensure continuous operation. These are useful in monitoring remote or automated operations. Watchdog can automatically restart applications should the monitored application stop for any reason.

enCONVEYOR

enCONVEYOR enables the automated downloading of files from an internet web address to DropBox for subsequent automatic ingestion into the DAD library. Files can be created, published and managed from remote sites via the WEB and automatically conveyed to DropBox for use by DAD. For example a local news clip might be remotely produced and published as www.yourdomain.com/news02022006.wav. enConveyor will automatically send this file to DropBox for ingestion in DAD’s library.

REMSVR and REMCLN

DAD’s Remote server and client options let you control DAD workstations remotely. This is useful when an individual operator is controlling multiple stations or studios from a single workstation and can run over a LAN or WAN.

16PLAY

This is a DAD option extending the number of simultaneous playback machines to 16.

SURROUND

DAD Surround enables full support (record and playout) of multichannel 5.1 or 7.1 surround sound within DAD. Currently, DAD Surround is available only with AudioScience 5041, 5042 or 5044 Sound Cards.

IPCONSOLE

Designed to interface DAD to various IP Console control surfaces. Currently available for Wheatstone D series, Wheatstone Bridge Router, SAS Rubicon and Harris Digital BMX.

Why buy from ENCO?

ENCO delivers world class audio delivery and automation tools to the most demanding television and radio broadcasters on six continents. Our solutions range from large multinational television live broadcast applications to the needs of the small market unattended radio station. We bring our customers flexible solutions that work the way they do while delivering exceptional value, performance and reliability.

ENCO Service and Support

ENCO’s full line of support options ranging from implementation guidance and training, to 24/7 telephone support will protect and increase the return from your automation investment. Our engineers understand your business challenges and are ready to help you achieve your goals. ENCO software products are regularly updated with powerful new features and capabilities to bring ever increasing value to your operation.
