

DAD Application Note

REMOTE VOICE TRACKING

DAD's Tracker Module - Easy to Learn, Easy to Use.

Remote Voice Tracking with DAD can be implemented over LAN, WAN or even the internet by simply deploying DAD and Gateway. ENCO's 'off-the-shelf' combination of existing tools allows Voice Tracking from anywhere without being required to purchase dedicated software or learn completely new applications.

DAD Remote Voice Tracking Benefits

- Same voicetracking interface as DAD, so it's easy to learn, easy to use
- Gateway automatically synchronizes local music and jingles
- Tracked playlists are automatically uploaded to station

Remote Voice Tracking Summary

One of the great things about DAD is that the depth of the tools that are included often allow users to do things that other products either can't do, or require additional modules. A perfect example of that is Remote Voice Tracking. Using our Gateway intelligent file transfer program, a low-resolution copy of music, jingles and any other desired audio is transferred to the remote workstation and automatically updated. Then, playlists to be voicetracked are also sent to the remote workstation via Gateway. The remote voice talent tracks on their local workstation and, when their tracking is complete, the tracked playlist, along with voicetracks, is uploaded to the station's file server, ready for merging with traffic or ready for air. With DAD's Remote Voice Tracking, there's no dependence on a fast, real-time connection. Instead, tracking is done on a local machine and then sent in background, with no user intervention required. There are several ways to configure Remote Voice Tracking to best meet your needs, but the most important thing is that you can do it with just DAD and Gateway. The power of DAD comes through again!

Requirements Remote site requires DAD license with a record module, tracker module and Gateway connectivity (either local copy or live connection to main system's Gateway). Broadband connection required at remote site and to station system when voicetracking over WAN or internet.

Why buy from ENCO?

ENCO delivers world class audio delivery and automation tools to the most demanding television and radio broadcasters on six continents. Our solutions range from large multinational television live broadcast applications to the needs of the small market unattended radio station. We bring our customers flexible solutions that work the way they do while delivering exceptional value, performance and reliability.

ENCO Service and Support

ENCO's full line of support options ranging from implementation guidance and training, to 24/7 telephone support will protect and increase the return from your automation investment. Our engineers understand your business challenges and are ready to help you achieve your goals. ENCO software products are regularly updated with powerful new features and capabilities to bring ever increasing value to your operation.
