

PRESS RELEASE

ENCO Releases StreamLine and DAD v 5.1d, Adding New User Interface, Metadata Features and Stronger Music Scheduling and Traffic Integration

Southfield, Michigan, October 16, 2006: ENCO Systems Inc., a leading worldwide provider of Digital Audio Delivery Systems, has released version 5.1d of its popular DAD® system. ENCO's DAD is used at thousands of installations worldwide to provide radio station audio management, automation, on-air assist and playout capabilities. Major network television broadcasters also utilize DADtv® systems to support live HDTV multi-channel audio management and to automate rights reporting functions.

DAD v 5.1d includes a new look and feel that is based on user feedback and human factors analysis. The new ActiveX® based controls provide a modern and very intuitive user interface that ensures all features are available at the right time at the right place.

Simple new "plug and play" capabilities for interfacing a wide array of studio and broadcast equipment have also been added to DAD. Automatic identification and configuration of general purpose interfaces greatly simplifies the process of systems integration in ever-changing studio set-ups.

StreamLine®, ENCO's all-in-one integrated solution for radio automation, music scheduling and traffic management, also incorporates the new interface as well as new stronger integration between music scheduling and traffic management modules.

DAD v 5.1d also incorporates greatly enhanced metadata capabilities to support growing demands related to information display in HD Radio, RDS, WEB integration and other applications. According to Eugene Novacek, ENCO President, "Broadcasters are being challenged with a wide array of media outlets ranging from podcasts on the WEB to instant messaging to mobile devices. These outlets may all require different types of information or data derived from a broadcast library, playlist or other sources. We have added robust metadata support that will enable broadcasters to quickly create a wide range of information, as well as make it easily extracted and automatically distributed, regardless of medium."

StreamLine and DAD v 5.1d are available now.
