

ENCO Systems Honored by Radio Magazine Readers With Two ART Awards

Southfield, Michigan, September 18, 2008: ENCO Systems Inc., a leading worldwide provider of Digital Audio Delivery Systems, announced that they received two Advancement in Radio Technology (ART) Awards from *Radio* magazine at a reception held at the NAB Radio Show in Austin, Texas. The ART Awards recognize innovation in radio broadcast technology through products that have a practical use and are available now.

Nominated products were assigned to one of 13 categories, and *Radio* magazine readers cast their vote for the top product in each category during August 2008. The results were tallied in early September.

This year, ENCO Systems earned one of the coveted ART Awards for RAMA, a Remotely Administered Metadata Appliance designed for radio stations and networks to provide ancillary data to HD Radio, RDS and station web sites which also won a Pick Hit award at NAB Show 2008 in Las Vegas from the *Radio* magazine editors. Also recognized was ENCO's flagship product, DAD, noted as Best Audio Storage and Playback System.

Eugene Novacek, President of ENCO Systems said, "It is something really special to win an award based on voting from actual readers and users. We work hard every day for our users and it is very gratifying and humbling to be recognized in this way by them."

To be eligible, the products had to have been available for use (not just announced) by July 2008. Nominations were submitted by *Radio* magazine readers, contributors and manufacturers. The winning products will be profiled in the October issue of *Radio* magazine.

Information on DAD and RAMA is available at the ENCO web site at www.enco.com and both are available now.
